

## Product Descriptions for Hair Care Regimen

It is important to know and categorize the function of each product and the level of danger of each of the ingredients. In one of our blogs, we explain why we must be very careful with what we allow to cross our first barrier of defense, the skin. Thanks to Biotechnology we understand how proteins interact with other proteins and our DNA and RNA, how the cell replicates and regulates its functions and how if mutations occur due to chemical or physical reaction, we can develop allergies, inflammation, immunotoxicity and even cancer.

The following score system we have issued is granted by clinical trials made for most of our products with Dr. Zoe Draelos, papers from PubMed and EGW. Being the number 1 the safest and the 10 the worst for you.

The overall score for the kit is 1

The active ingredient for this kit is 

GF Elixir Serum

10ml

**Product Name:** GF Elixir Serum

**Recommended ages:** All ages

**pH:** 6.3

This is meant for any part of the body.

**Main Asset:**

Component	Function in nature	%
<b>Mesenchymal Stem Cells</b> <b>Growth Factors and</b> <b>Exosomes from the umbilical cord</b>	<b>GF are proteins that regulate immune responses and reproductive functions of the cell.
