

Product Descriptions for Hair Care Regimen

It is important to know and categorize the function of each product and the level of danger of each of the ingredients. In one of our blogs, we explain why we must be very careful with what we allow to cross our first barrier of defense, the skin. Thanks to Biotechnology we understand how proteins interact with other proteins and our DNA and RNA, how the cell replicates and regulates its functions and how if mutations occur due to chemical or physical reaction, we can develop allergies, inflammation, immunotoxicity and even cancer.

The following score system we have issued is granted by clinical trials made for most of our products with Dr. Zoe Draelos, papers from PubMed and EGW. Being the number 1 the safest and the 10 the worst for you.

The overall score for the kit is 1

The active ingredient for this kit is 

Product Name: Hair vitamin

Recommended for: Fragile hair or those experiencing hair loss

pH: 6.3

This is always the last step in your daily hair care. Remember to massage for about 5-10 min focusing on the root.

This is meant for hair.

Features: Improves hair quality, making it stronger and healthier.

- Nourishes and hydrates.
- Repairs damaged hair.
- Recommended for thinning hair.
- Indicated for alopecia.
- Improves the appearance of the beard.

Precautions/Caution: External/Skin use only. Do not eat. Suspend use in case of reaction/allergy. Keep out of reach of children.

Main Assets:

Component	Function	%
Mesenchymal Stem Cells	GF are proteins that regulate immune responses and reproductive functions of the cell. This active ingredient is not synthesized in a lab, it is extracted from placentas and cultured. It contains anti-inflammatory and regenerative properties. Exosomes are vesicles generated by stem cells that carry macromolecules and improve intercellular communications.	20%
Growth Factors and Exosomes		

Arginine	Amino Acid that protects the skin from free radical damage and allows skin reparation.	1% 
Vitamin B5	Stimulates the root of the hair follicle. This restores some of the elasticity to the collagen that surrounds that area. Thus, it helps prevent hair loss and also helps control the effects of androgenic alopecia.	1% 
Sodium Lactate	Sodium lactate supports hair growth in a few ways. By increasing your scalp's moisture, sodium lactate can boost hair elasticity, which reduces breakage and brittleness.	1%
Amino acids	Amino acids add strength, like any protein, to the strands of the same and thus manage to reduce their size allowing better withstand moisture. Aspartic Acid, Glycine, Alanine, Serine, Valine, Proline, Threonine, Isoleucine, Histidine, Phenylalanine.	1%-5% 

Home Use Instructions: Apply the conditioner after rinsing the hair with plenty of water. First apply it to the ends and then spread it towards the mid length. Massage lightly to help nutrients penetrate well into the hair. Let it act for a few minutes and rinse with plenty of water. Avoid hot/warm water in this step.

Other important Ingredients:

Component	Function	Score
Double Distilled Water	Solvent.	
Cellulose	Anti-cracking agent for cosmetics used to improve viscosity.	

Sodium PCA	Is the sodium salt of pyrrolidone carboxylic acid that is an amino acid found in the skin barrier.	
Hydroxyacetophenone	Amicable Preservative	
Fragrance	Fragrance was tested on the clinical trials. This product is recommended for sensitive skin.
